AGM TYPE OF AUXILIARY BATTERIES ESPECIALLY ADAPTED TO THE LEISURE WORLD.

AGM technology batteries are ideal for use with repetitive cycles for daily use with slow and deep discharges of electrical appliances such as fridges, lighting, heating, etc.

These service batteries are robust and allow discharge rates of up to 60% of battery capacity to take advantage of the maximum available energy.

These batteries are sealed (lying down possible) and maintenance free with a very low self-discharge: 1 to 3% per month. They are protected against pressure variations and designed to prevent gas accumulation inside the battery.

For the installation they are provided with adapters for the fixing of self-tightening lugs and lugs with butterfly clamp.
